EXPERIENCE

Fusion DMS I Make the change work

Recife - Brazil, Software Engineer

Apr 222 - Present

Currently I work on the development and implementation of features for the customer portal using React Native with Typescript and performing tests on Android and IOS, building interface and improving application performance..

Accenture Brazil I Make the change work

Campina Grande - Brazil, Mid Level Operations Analyst

Nov 2021 - Apr 2022

I worked in the One Financial Security team, where our objective is to redirect the projects of our partners Santander and Pioneer to BOM to reduce vulnerabilities in project dependencies in five different countries. Among the technologies used in the One Financial Security team are Java (Maven/Spring), Redis and SQL Databases.

Accenture Brazil I Make the change work

Campina Grande - Brazil, Mid Level Operations Analyst

Apr 2021 - Nov 2021

I worked in the Audit team, where our goal is to implement an audit module for our OI partners. a safe and frictionless way to integrate a new way of auditing to new projects and thus compose a robust, reliable and secure listening module for auditing for all OI customers with no other concerns besides the import process. Among the technologies used in the audit module are Node.js (Javascript), Elasticsearch, Kibana, Redis and SQL Databases.

EXPERIENCE

Grupo Vicoa Brasil

Campina Grande - Brazil, Junior Web Developer

Jun 2020 - Mar 2021

I worked with the development of a CRM system for the telecommunications segment, solving problems, developing solutions, implementing new modules, monitoring multiple databases, supporting directly with end users and with fullstack development, Among the technologies used in the Grupo Vicoa Brasil are Node.js (Javascript with Typescript), React (Typescript), PHP, Next.Js, and SQL Databases.
